MUSTERHAUS
GRONINGER STRASSE

Foto: Ansgar Schwarz

Inspired by the classic brick buildings of Ostfriesland, the Musterhaus embodies the typical charm and tradition of the region. This two-story residential house, featuring two living units and a total living area of approximately 160 sqm, is constructed in a timber frame with a brick facade. The climate-friendly efficiency house is equipped with the latest energy-saving technology, including a heat pump, photovoltaic system, and energy storage, making it independent of fossil fuels. It stands as a representative example for an entire quarter – a highly modern and energy-efficient residential area.
